The 2025 SPRING Portal project team from Yaguang Zhang's AgBridge Workforce Development Program, funded by U.S. NSF Internet of Things for Precision Agriculture (IoT4Ag), has recently received the Educational Aids Blue Ribbon Award from ASABE - American Society of Agricultural and Biological Engineers.

This award recognizes excellence in informational materials that advance the understanding of agricultural and biological engineering beyond traditional classroom settings. The SPRING Portal project exemplifies this initiative, bringing SPRING tools and sensors directly to users.

The team built a website that displayed a simplified version of data points, helping educators teach data visualization like how to read a graph. The data used was published by IoT4Ag, partners and even students from a simplified SPRING unit at their school.

Congratulations to the entire SPRING team on this well-deserved award!
